

Publishing your Project to the IIS Server

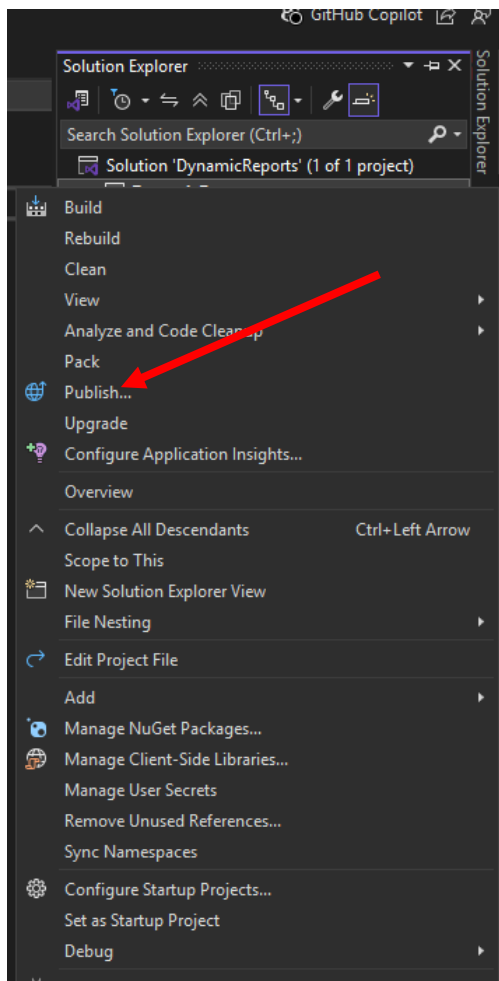

Follow the steps below in order to publish your project onto the IIS Server

There are **10 steps** , please make sure you complete all in order to correctly publish onto the IIS server.

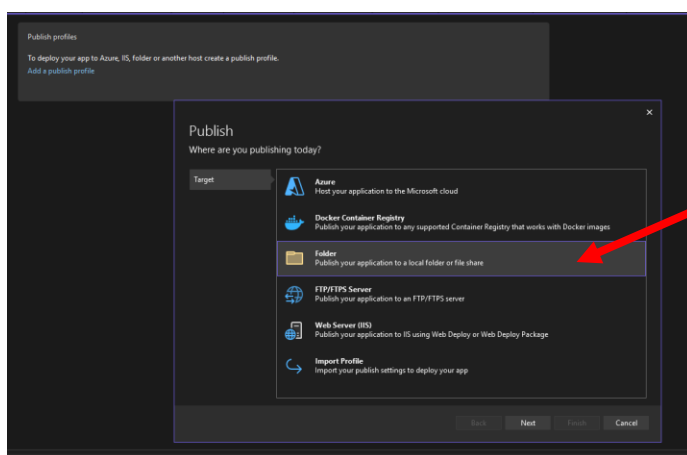

Step 1: Open your Solution Explorer then right click by the name of the project

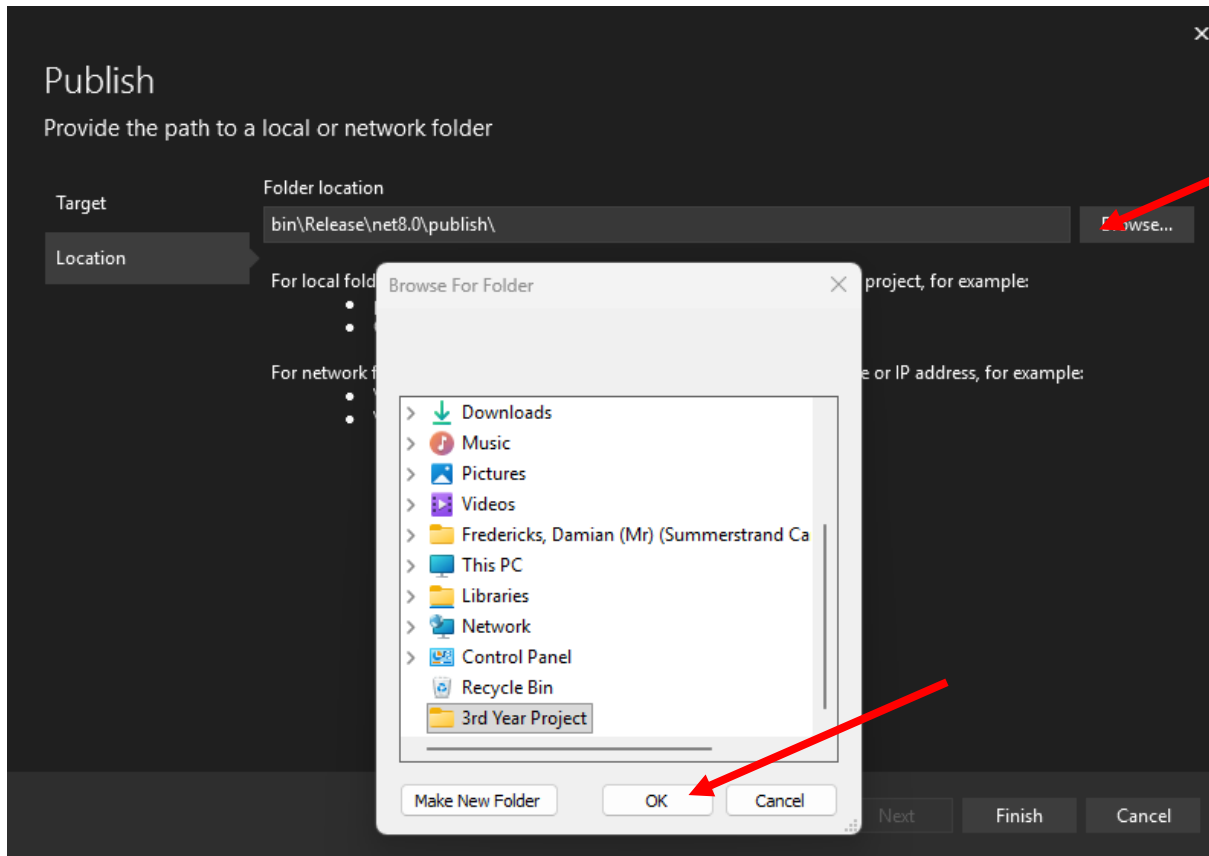

Step 2: Your screen should look like the below then select the “**Publish**” option

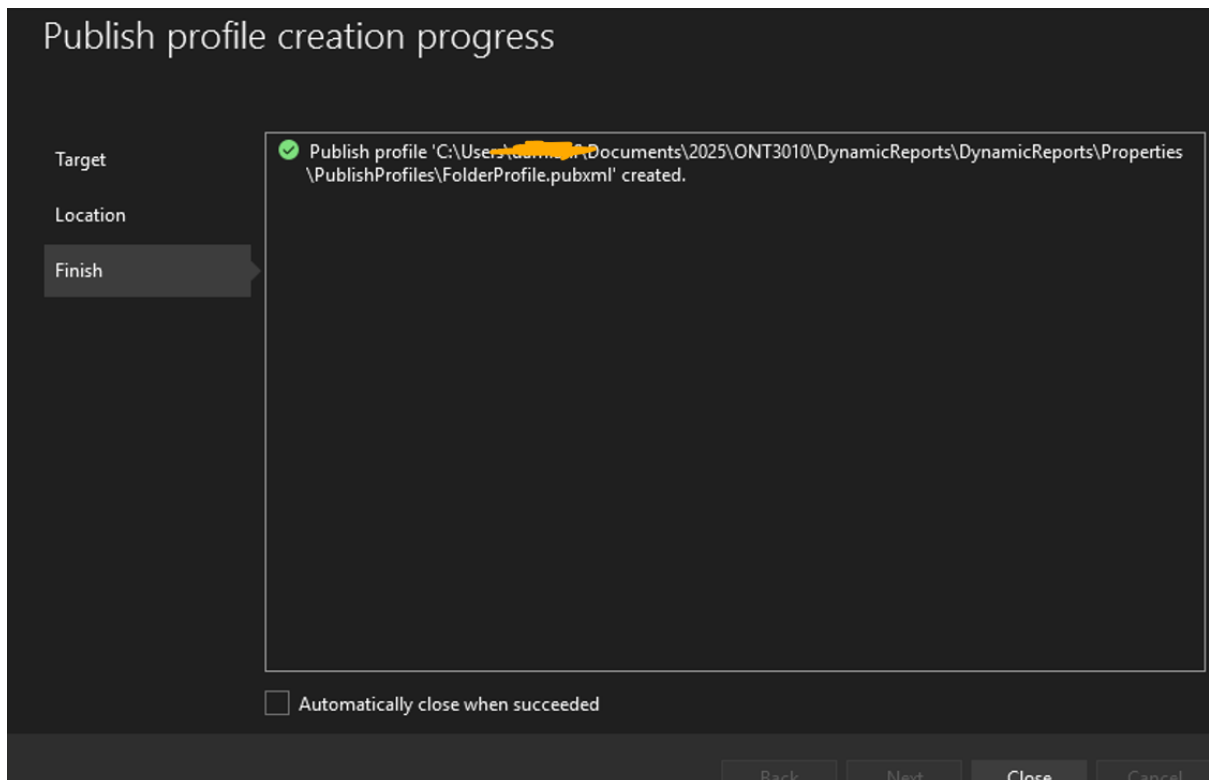

Step 3: Select the Folder option

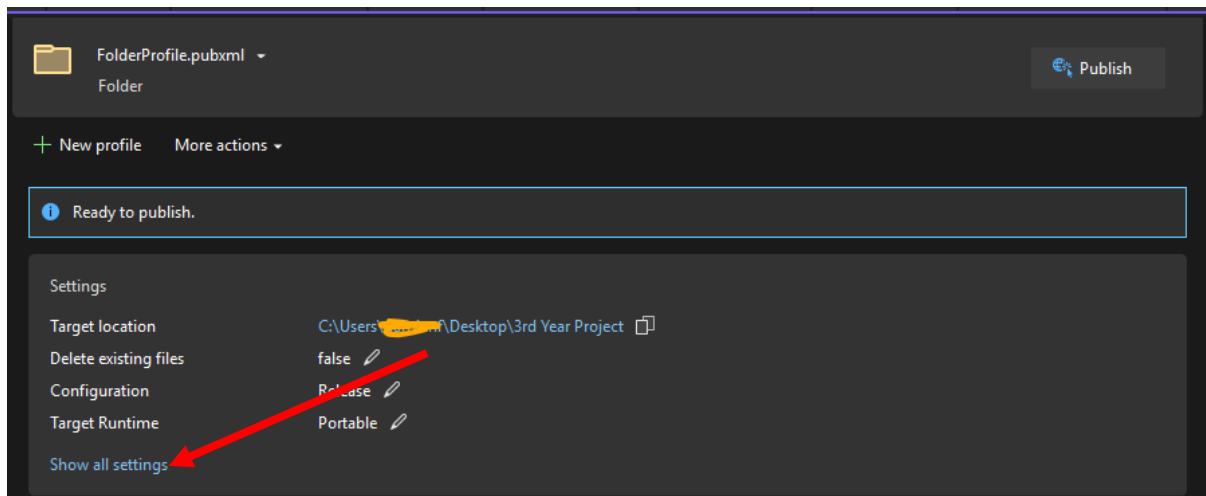

Step 4: Choose where you want to publish the data to. I would suggest before you click the browse button that you Create New Folder on your Desktop and select the new folder(which is on your desktop) to publish the project to. Once you press Ok then the Folder Location will be updated to the Desktop location new folder. Please click the Finish button

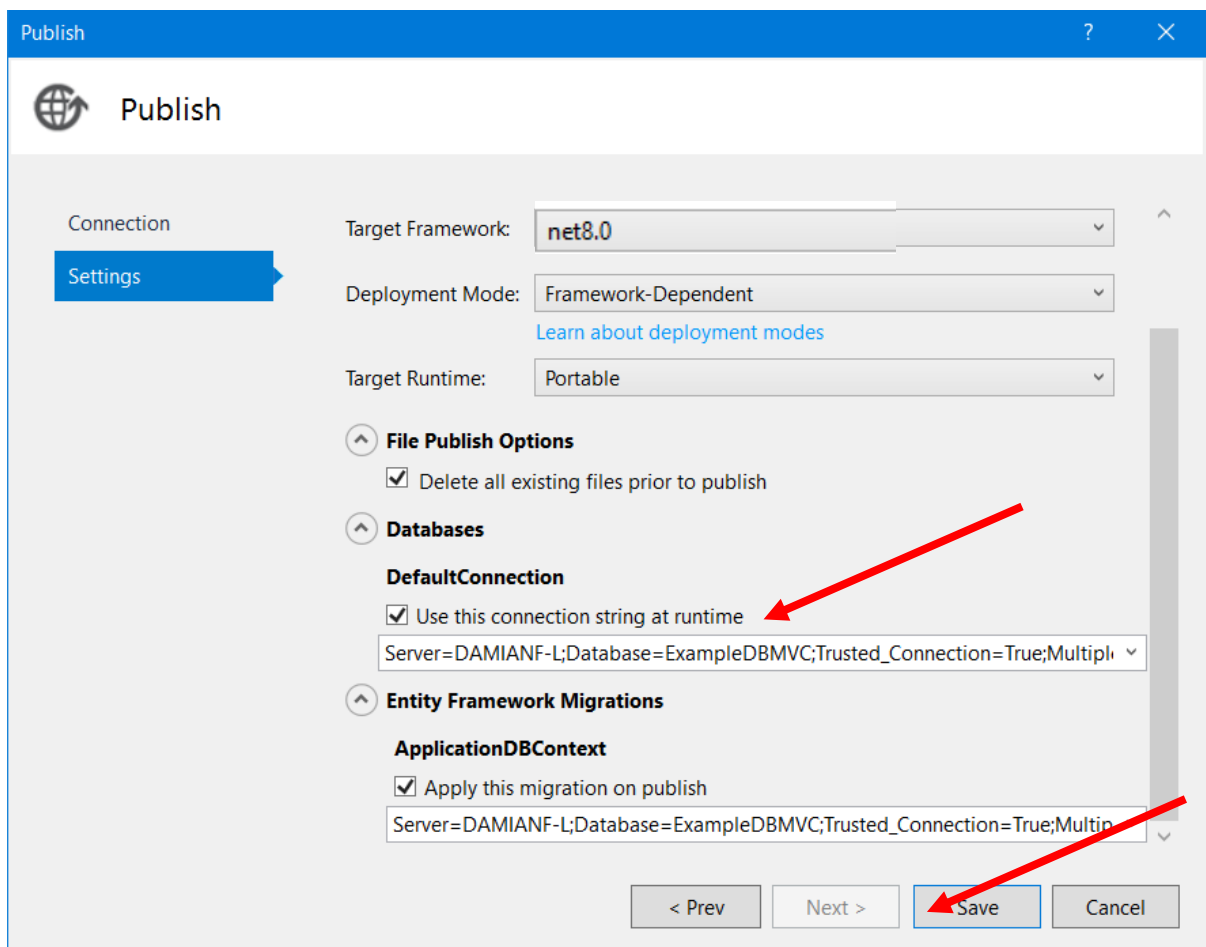

Your screen should look like the below. Press Close

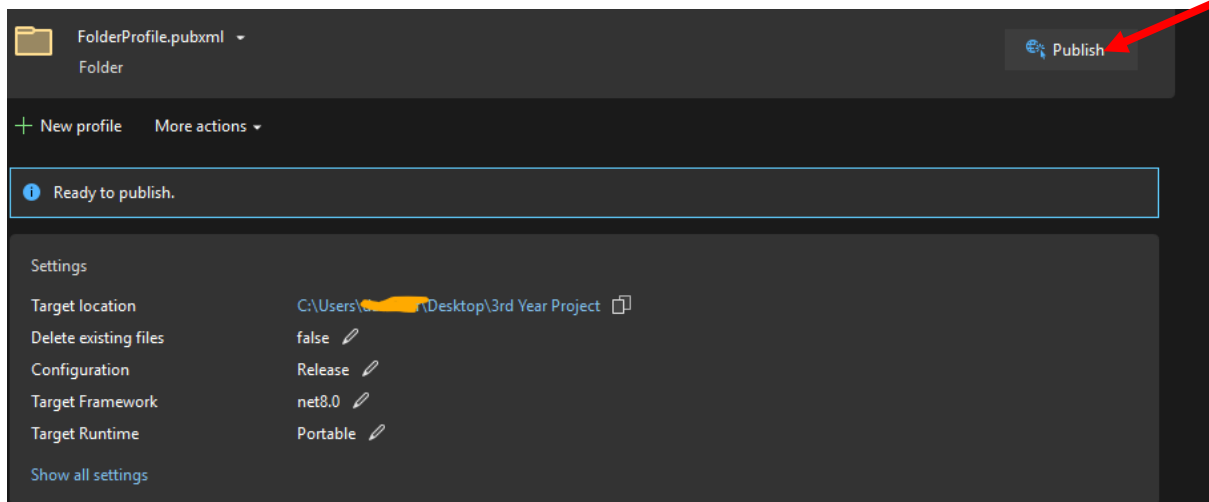

Step 5: Once the profile has been created, select the Show All Settings then a dialog box will open as seen in step 6

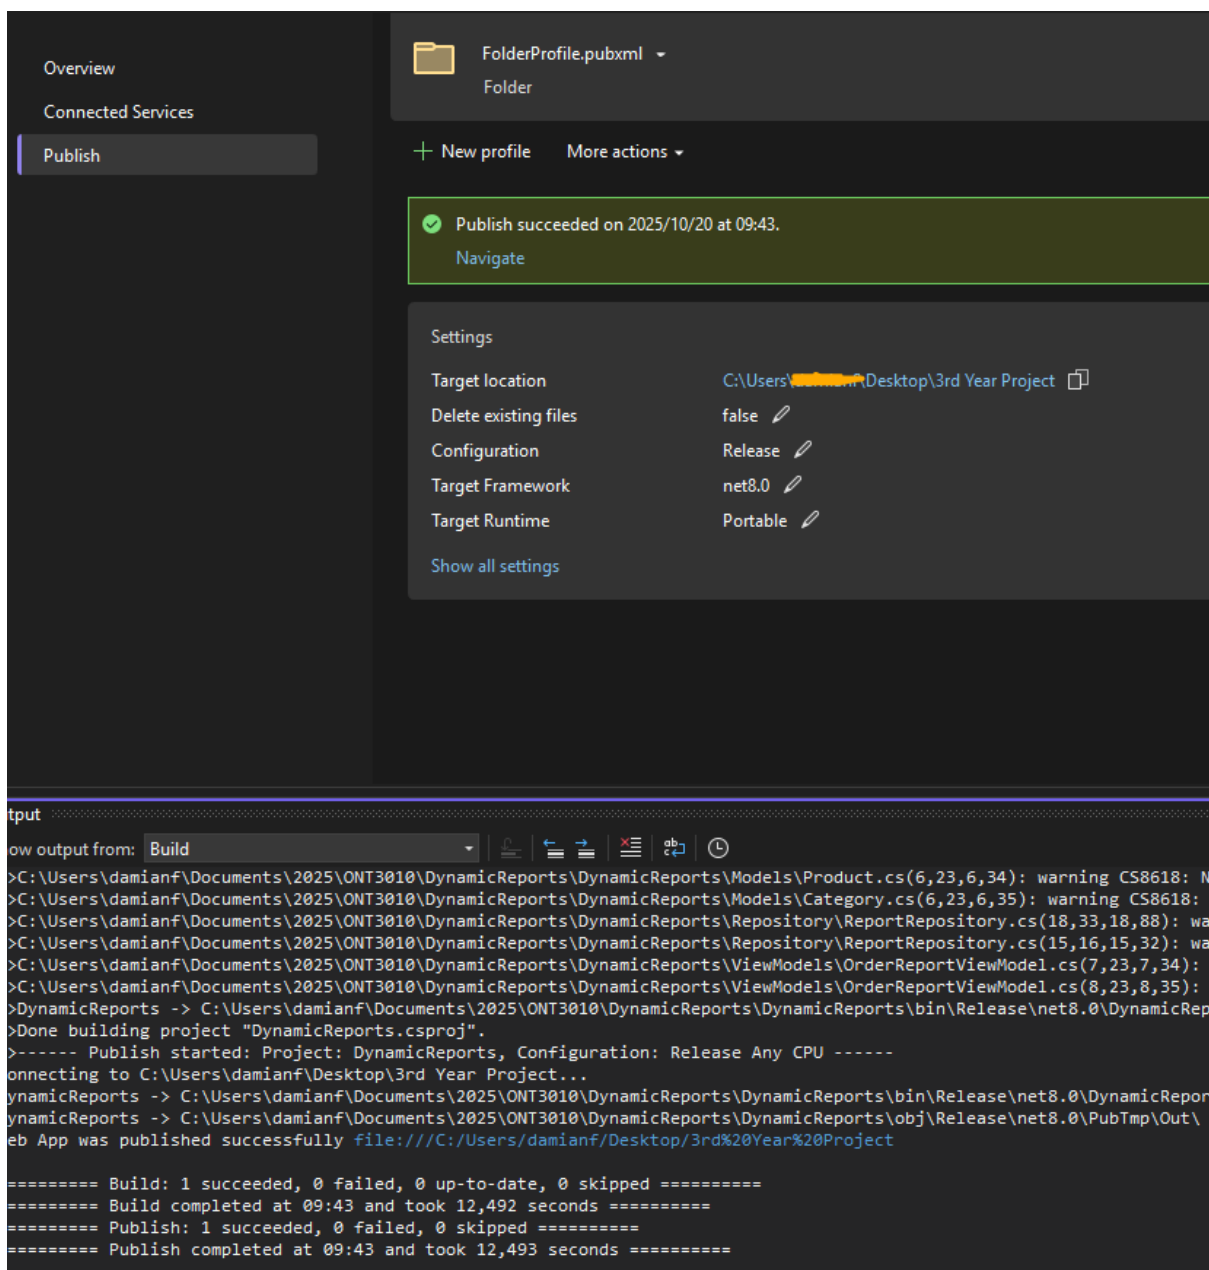

Step 6: Make sure that your connection is referencing the database that is on the server and not your local machine. If you used EF make sure that the checkbox is also selected. Make sure that you are referencing the correct framework number. Click **Save** when you are done.

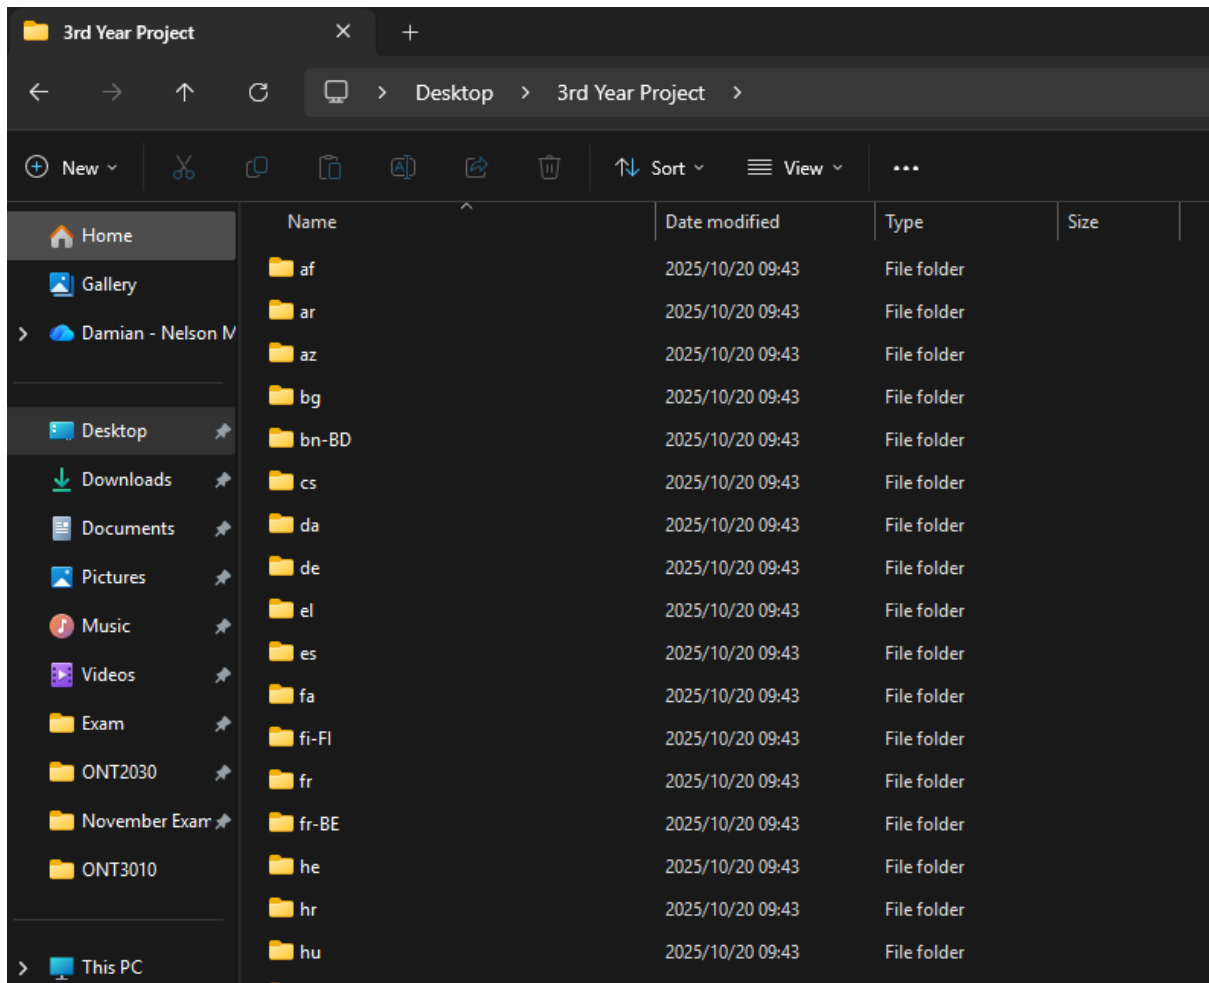

Step 7: Click the publish button

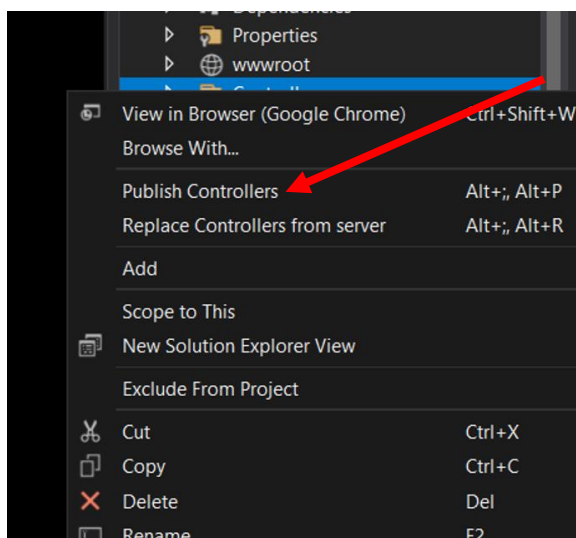

Once it has successfully passed you will receive the following output

Locate the folder you created on your Desktop, it should look similar to the image below

Step 8: After the files have been published you will need to publish your Controllers. Right-click on the Controller and clic "**Publish Controller**". Please do the same for your Models ,Views.

Step 9: Publish any folder you created e.g Classes or repository folders. If you have an image folder you will need to publish that folder as well as. Right click and select Publish

Step 10: Copy the **contents** inside your desktop folder where you published to and paste the data onto your specific iis group folder.

Once all the contents have been copied over to the server you will need to test your website that it works on the server. Open up a browser of your choice and type in the URL <https://soit-iis.mandela.ac.za/GRP-03-yourgroupnumber>
